

### Remarks

A paper and a computer readable form of a substitute sequence listing accompany this response. It is believed the contents of the two forms are identical. The contents of the substitute sequence listing are identical to the sequence listing filed with the application except the nucleotide sequence in SEQ ID NO:1 has been removed. SEQ ID NO:1 is properly shown as an amino acid sequence.

The substitute sequence listing adds no new matter to the application.

Respectfully submitted,

Date: April 5, 2004
